

Al Mutlaq United Company and Microlistics to Deploy ISIS Warehouse Management Software in Saudi Arabia

Melbourne, AUSTRALIA, May 1st, 2009 – Al Mutlaq United Company and Microlistics, an Australian-based supply chain technology company, today announced the execution of a Partnership Agreement to allow Al Mutlaq United to market, implement and support Microlistics' ISIS Warehouse Management System (WMS) software in the Kingdom of Saudi Arabia. Company officials, announcing the Partnership noted that the intended Partnership aims to strengthen Al Mutlaq's supply chain systems integration capabilities and complete Microlistics' goal of building a global distribution system for its WMS software through key Distribution Partnerships.

An ISIS system uses highly advanced supply chain execution technology to ensure distribution environments are robust, yet highly flexible to react to market demands. The Microlistics software suite includes ISIS Express, a pre-configured, off-the-shelf WMS solution; ISIS Enterprise, an advanced WMS providing seamless enterprise integration; and ISIS 3PL, a WMS solution for the growing third party logistics market providers.

"More of our multinational clients, such as Nestle, Gulf Warehousing Company Qatar and The CEVA Group, are looking to install ISIS-based software systems outside of Australasia and Asia," said Microlistics Founder and Managing Director Mark Dawson. "We want to provide the best local market support possible and believe this should be done locally with world-class enterprises such as Al Mutlaq United Company."

In addition to integrating complex systems for various industries including Logistics, Oil & Gas and Food & Beverage industries, Al Mutlaq United is a major provider of warehousing and distribution applications including material handling, automation, information technology, facilities construction and outsourced support. Al Mutlaq's Clients include: Saudi Aramco, Petro Rabigh, Proctor & Gamble, Toyota, Red Sean Gateway and Agility Logistics.

"We are in the business of providing total solutions for the supply chain world," said Mr. Tarig Al Mutlaq, Managing Director for Al Mutlaq United Company. "The ISIS technology has proven that it can handle customer operations varying in size, magnitude and complexity, and a variety of industries - with a quick return on investment."

With this Partnership in place, Microlistics anticipates joining the ranks of key software companies who support global clients and distributors. For Al Mutlaq United, a leading systems integrator in Saudi Arabia, the Partnership heralds a relationship with a proven supply chain execution application to add value to its Supply Chain and Logistics offering.

"Our clients are looking for practical solutions from players with genuine supply chain experience," Microlistics' Dawson emphasized. "Given Al Mutlaq's ability to deliver turnkey supply chain and material handling solutions, we found our relationship to be a natural alliance."

About Microlistics

Microlistics develops and implements best-of-breed supply chain execution technology for global organizations. As specialists in supply chain management, they combine practical knowledge and experience with leading-edge software development. As a key link in any supply chain, the effective control of the warehousing and inventory management function can dramatically reduce operating costs as well as improve service to 'end user' customers. Microlistics recognized this fact many years ago and concentrated efforts on developing the most advanced warehouse management systems on the market. Today, these systems are known as the ISIS suite of Warehouse Management Systems. Microlistics provides 24-hour global service and support for its software from established facilities in Australia, Asia and the Middle East.

About Al Mutlaq United Company
