

ISIS WMS ensures Foodboss Cold Stores meet their Clients' requirements

Melbourne, May 2011 – Foodboss Coldstores, the very successful third party Cold Storage and Food Distribution warehouse in Penrith, NSW. Managing Director, Paul Rohan, says “In 2007 Microlistics were asked to assess our newly constructed purpose built Cold Storage and Distribution facilities in the west of Sydney NSW.

Our business had typically been geared to high pallet storage and turnover; the number of different Clients and Stock Keeping Units (SKU) including Individual order picking was continually expanding which required the stock control to be more accurate and available on a real time basis.

Using the ISIS WMS with its fully Integrated Radio Frequency capability has enabled Foodboss to meet the strict batch and traceability requirements demanded from their customers. “The system is also able to be configured to our individual client’s requirements, such as Catchweight, FIFO and Individual Batch or Lot requirements.”

Foodboss has also implemented the fully Integrated ISIS 3rd Party Billing module which utilises the Activity Based Costing (ABC) audit trail within ISIS and ensures that all transactions including Storage, Individual activities such as picking and consolidation as well as any Value Added Services are captured. Paul Rohan states that this alone has reduced administration overheads and ensured Foodboss were able to capture and bill for ALL activities undertaken in the warehouse. It also enables us to provide detailed activity analysis where required for various Clients.

Paul also has high praise for the ongoing support from Microlistics. “After ISIS was successfully implemented, we have found the support of the system to be professionally managed with timely reports and assistance.

“We are currently planning with Microlistics to implement the latest ISIS Java 4.2 upgrade which will further enhance our business and meet the ever increasing demands for our growing list of Clients’ said Paul.”

About Foodboss

Foodboss Cold Store was built to service the needs of food companies looking for more than cold storage - such as: service, traceability, reliable warehouse management system, temperature control, security and communication.

FoodBoss was conceived and constructed with the future foremost in our minds. This is why we have invested in developing our cold store facility with a range of features that help make it the most environmentally friendly cold store facility in Australia.

Foodboss features:

- The most modern warehouse management system that is available 24/7 with online user access (ISIS)
- The most up to date security system outside and inside the building
- Cold store technology that keeps the temperature under constant surveillance with back to base recording
- Staff that are helpful, friendly and available
